PROTECTOR®
Health & Hygiene

DESIGNED TO PROTECT

NEW ANTIMICROBIAL LATEX EXAMINATION GLOVES

Your defence against bacteria and harmful microorganisms.

- 99.99% antimicrobial efficacy
- Kills bacteria and microorganisms upon contact with the surface of the gloves
- Infection prevention
- Protection throughout
- Safe to use

TESTED EFFICACY AGAINST DANGEROUS MICROORGANISMS

The antimicrobial additives in Symphony's d_2p technology are **independently tested** to ISO 22196 to demonstrate 99.99% efficacy against over 50 common organisms which includes the following, some of them dangerous and lethal:

- MRSA
- CORYNEBACTERIUM
- KLIECSELLA
- ESCHERICHIA COLI
- STAPHYLOCOCCUS AUREUS
- SALMONELLA
- CAMPYLOBACTER
- LISTERIA
- PSEUDOMONAS
- ASPERGILLUS NIGER
- CANDIDA
- PENICILLIUM PINOPHILIUM

Some of these can survive on surfaces for several days and all of them are named on the CDC hit list.

Bacteria and other microorganisms are killed upon contact with the surface of PROTECTOR® antimicrobial gloves and provide protection to both users and persons who come into contact with these gloves.

INDUSTRY-LEADING QUALITY

Health & Hygiene Limited believes that everyone should have access to good hygiene which is the first and important step to living a healthy life.

Incorporated in UK, Health & Hygiene Limited has specially developed a class of gloves with high-performance antimicrobial efficacy and will continue to develop high-quality antimicrobial products suitable for healthcare, household and personal care under its brand PROTECTOR® to promote safe, healthy and hygienic living.

To assure the highest-quality in the industry for PROTECTOR® antimicrobial products, Health & Hygiene Limited adopts Symphony's innovative d_2p antimicrobial technology. The Active in d_2p(am) is

- ✔ Registered with US Environmental Protection Agency
- ✔ In compliance with US FDA for food contact safety
- ✔ Notified under EU's Regulation (BPR-EU-no. 528/2012)

PROTECTOR® DEFENDS AND PREVENTS

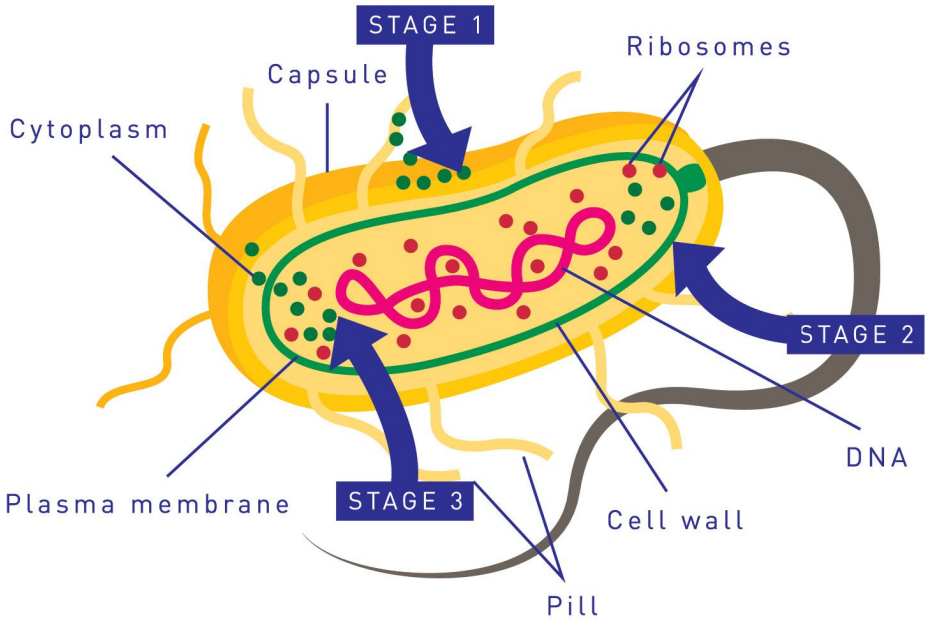
Safe to use, PROTECTOR® antimicrobial latex examination gloves will act as **your first line of active defence** against harmful bacteria and disease-causing microorganisms that may spread from contaminated surfaces to healthcare workers or patients causing healthcare-associated infections.

These surfaces include medical devices, beds, linens, mattresses, furniture, door handles, equipment, surgical masks, gloves, gowns, table tops, wall surfaces etc.

In the non-healthcare industry such as hospitality, laboratories, consumer goods, and food service industries, microbial contamination can be prevented and to achieve a **higher standard of safety and hygiene**.

Another accelerating threat to global health and food service, is antibiotic resistant organisms. A significant cause of illness and mortality globally, it is vital to **prevent the spread and reduce the impact of antibiotic resistance**, particularly, before these dangerous microorganisms enter the human body.

HOW d_2p ANTI-MICROBIAL TECHNOLOGY WORKS



1. d_2p enters the bacterial membrane and cause damage and disruption to the cellular wall before penetrating the cell

2. d_2p is highly reactive with the cell enzymes and can deactivate these vital molecules

3. Interrupt the cell DNA preventing replication and cell formation

THE PROTECTOR® PREFERENCE

Highly elastic, strong, comfortable and durable, PROTECTOR® gloves retain high level of comfort and provide optimal protection against transfer, growth and spread of bacterial and fungal contamination, whilst integrating innovative technologies.

PROTECTOR® gloves are manufactured with stringent quality control compliance and are certified to ISO 9001, ISO 13485 and carries CE Marking (European Comformity).

Make the decision to switch to a new standard.

PROTECTOR® Antimicrobial Latex Examination Gloves Features

TYPE	Powder-free
MATERIAL	Natural High-Quality Latex
COLOUR	Natural white
FEATURES	Polymer coated or online chlorinated, ambidextrous, smooth
STORAGE	3 years from date of manufacturing

WHY PROTECTOR® ANTIMICROBIAL GLOVES?

Antimicrobial Technology and Innovation

Incorporating the innovative technology from Symphony Environmental Technologies Plc, the PROTECTOR® antimicrobial latex examination gloves is in a class of its own offering high antimicrobial efficacy for a complete protection spectrum and safe for all users, including users requiring food and safety contact.

d_2p antimicrobial technology offers a complete protection spectrum against bacteria (for both gram-positive and gram-negative), fungi, mould, mildew, yeast and algae.

The controlled release of the Active in d_2p technology provides a powerful and effective antimicrobial protection throughout its use and for the lifetime of PROTECTOR® gloves.
